CSS3 for Responsive Web Design

Category: Software Development & Programming | **Vendor:** Various

Duration: 32.00 hours (4 days) **26.0 CPD Hours** **Rating:** ⭐ 4.6 (5,878 reviews)

Course Information

Delivery Format: Instructor Led - Online

Course Overview

Learn how to build web pages that are accessible across a wide range of devices, and ensure a great User Experience (UX) for all customers who interact with your website. In this training course, you gain the skills to design responsive and visually engaging content-oriented web pages using CSS3, apply mobile-first design techniques, and build responsive web forms, menus, and columns.

About This Course

Learn how to build web pages that are accessible across a wide range of devices, and ensure a great User Experience (UX) for all customers who interact with your website. In this training course, you gain the skills to design responsive and visually engaging content-oriented web pages using CSS3, apply mobile-first design techniques, and build responsive web forms, menus, and columns.

Prerequisites & Entry Requirements

General Prerequisites:

HTML experience at the level of:

- Developing a Website

Recommended Experience:

- Familiarity with CSS syntax

Learning Outcomes

Upon successful completion of this course, participants will be able to:

- Design responsive web content using Cascading Style Sheets (CSS3)
- Implement new CSS3 syntax into your legacy applications
- Enhance Responsive Web Design (RWD) with jQuery plugins
- Position HTML elements with accuracy and consistency
- Apply best practices that support modern and legacy browsers

Detailed Course Outline

Introduction to Cascading Style Sheets (CSS)

Employing CSS syntax and semantics

- Separating content from design
- Discovering how CSS makes RWD possible
- Structuring HTML containers with IDs
- Manipulating CSS colour rules

Integrating style sheets

- Choosing from inline, embedded and external styles
- Optimising rules via group selectors
- Targeting elements with contextual selectors
- Demystifying the Cascade Inheritance Model
- Updating browser with CSS developer tools

Leveraging the CSS Box Model

Manipulating HTML containers

- Selecting accessible units of measure
- Overcoming collapsing CSS margins
- Moving HTML content with CSS margins
- Condensing rules with shorthand definitions
- Distinguishing relative from absolute position

Adopting accessible units of measure

- Tailoring global style resets
- Overriding author styles
- Distinguishing block from inline elements
- Defining WCAG accessibility obligations
-

Positioning with Accuracy and Consistency

Explicitly rendering any HTML container

- Replacing HTML align attribute with CSS float and clear
- Exploiting the default static position rule
- Extending position with relative relationships

Advanced positioning

- Creating advanced contextual position with absolute rules
- Replacing HTML frames with fixed position rule

CSS3 Selection Syntax

Making optimised and advances selections

- Reviewing contextual and combinatory selector syntax
- Introducing CSS3 semantic pseudo selectors
- Chaining pseudo selectors for more specific selections

Advanced Selection Techniques

- Moving beyond selecting by class, ID or HTML elements
- Exploiting selections by behaviour
- Selecting by HTML attribute content
- Selecting based on HTML DOM relationships
- Managing dynamic content using set selectors

Designing Responsive Content

Combining the three CSS ingredients to RWD

- Assessing mobile-specific design theory
- Incorporating a mobile-first design
- Exploring liquid dimensions
- Introducing min and max attributes

Responsive column layout

- Designing multi-column layouts that fit any device
- Performing basic calculations with calc()
- Dealing with browser vendor prefixes

Exploiting CSS3 flexible layout

- Implementing columns with CSS flexbox
- Composing parent and child grid styles
- Extending CSS2 @media directives
- Detecting viewport height, width and orientation
- Exploring mobile device support

Accessible and Responsive Forms

Web Consortium Accessibility Guidelines

- Exploring regional interpretations of WCAG
- Complementing HTML5 form validation
- Styling WCAG compliant fieldsets, labels and legends

Enhancing RWD with jQuery

- Animating content with pure CSS transitions and transforms

- Modifying DOM properties

- Adding responsive menu toggles

- Adding responsive and infinite scrolling

Providing legacy browser support

- Automated prefix and fallback libraries

- SASS and LESS pre-processors

Skills You Will Learn:

- Design responsive web content using Cascading Style Sheets (CSS3)
- Implement new CSS3 syntax into your legacy applications
- Enhance Responsive Web Design (RWD) with jQuery plugins
- Position HTML elements with accuracy and consistency
- Apply best practices that support modern and legacy browsers
