Students learn how to troubleshoot and upgrade to Symantec Endpoint Protection 14x and how to monitor and troubleshoot the SEPM, client-to-SEPM communication, content distribution, client deployments, and protection technologies.

The class also covers how to follow Symantec best practices for troubleshooting and remediating a virus outbreak and performing advanced monitoring using IT Analytics.This course includes practical hands-on exercises that enable you to test your new skills and begin to use those skills in a working environment.

Prerequisites & Entry Requirements

General Prerequisites:

You must have attended the Symantec Endpoint Protection 14.1: Administration course or have one year of day-to-day experience maintaining a SEP environment, which includes basic troubleshooting.

Learning Outcomes

Upon successful completion of this course, participants will be able to:

By the completion of this course, you will be able to:

- Monitor client-to-SEPM communication.
- Maintain a Symantec Endpoint Protection environment.
- Upgrade the Symantec Endpoint Protection environment.
- Monitor and troubleshoot a Symantec Endpoint Protection environment.
- Monitor and troubleshoot SEPM and client content delivery.
- Monitor and troubleshoot protection technologies.
- Use best practices when troubleshooting and remediating a virus outbreak.
- Use IT Analytics to generate comprehensive reports from Symantec Endpoint Protection.

Detailed Course Outline

Introduction

- Course overview
- The classroom lab environment

Troubleshooting Techniques and Tools

- Use a systematic approach for problem solving.
- Describe Symantec and third-party troubleshooting tools and how they are used.
- Know which SEPM and SEP client logs to research when troubleshooting specific issues.
- Use the Symantec Knowledge Base and interact with Symantec Technical Support.

SEPM Console Troubleshooting

- Identify critical SEP 14x services and processes.
- Troubleshoot authentication issues.
- Troubleshoot the embedded and SQL database connection and configuration.

Troubleshoot Installation and Migration Issues

- Describe how data is transferred during replication and know which replication logs are affected.
- Troubleshoot a new SEPM SEP 14x installation.
- Describe how to upgrade the SEPM.
- Ensure a successful SEPM upgrade.
- Upgrade Windows clients and troubleshoot the deployment.
- Ensure Mac compatibility and troubleshoot upgrading Mac clients.
- Install and troubleshoot Linux client installations.

Troubleshooting Client Communication Issues

- Identify the interactions between the client and the SEPM.
- Identify heartbeat process.
- Locate and configure debug logs for client communication issues.
- Describe communications issues from the client perspective.
- Describe the tools and methods to repair communication problems
- Identify Linux and Mac communication issues.

Content Distribution Issues

- Determine which LiveUpdate source works best for your organization.

- Examine how the SEPM connects to LiveUpdate and downloads content.

- Examine LiveUpdate logs.

- Manage LIveUpdate for SEP 14x clients.

- Describe Symantec best practices for managing and monitoring GUPs, and describe the use the Symantec Endpoint Protection Content Distribution Monitor.

Reporting

- Identify and examine critical SEPM reports for use during a malware outbreak.

- Introducing IT Analytics

- Creating reports using IT Analytics.

Incident Handling

- Life of an outbreak.

- Handling false positives.

- Identifying false positives.

Performance Issues

- Assess SEP performance using sizing and scalability recommendations.

- Optimize performance for the SEPM.

- Optimize performance for the SEP client.

- Utilities and other resources.

- Case studies.

Skills You Will Learn:

By the completion of this course, you will be able to:

- Monitor client-to-SEPM communication.
- Maintain a Symantec Endpoint Protection environment.
- Upgrade the Symantec Endpoint Protection environment.
- Monitor and troubleshoot a Symantec Endpoint Protection environment.
- Monitor and troubleshoot SEPM and client content delivery.
- Monitor and troubleshoot protection technologies.
- Use best practices when troubleshooting and remediating a virus outbreak.
- Use IT Analytics to generate comprehensive reports from Symantec Endpoint Protection.
